

Power Adjustment Valve Change

The Power Adjustment Valve in all Series 55 and Adjustable 60 Series Mixers will be enhanced to include an M6 hex fitting in the top, allowing adjustments to be made with either metric or imperial tools. The change is projected to go into effect September, 2007.

Note: The Power Adjustment Valve is not serviceable and cannot be changed or replaced in the field.

The change to the Power Adjustment Valve will affect all 55 and Adjustable Series 60 Mixers (and the Carburetors that utilize these Mixers).
